

## Sustainability

Hydroemission CRT offers an intrinsic advantage to reduce environmental impact by limiting both the usage of Actives and the resources required for application.

As such, claims of environmental friendliness are natural to us, and we always gave maximum relevance to ways to certify such claims.

It was relatively easy to identify the correct framework of reference when the company was based in Singapore, presenting ready solutions. In this period (until 2018) we gained the following:

- Green Label (Environmental Innovative Products) (2014-2018)
- Halal (Cleaning Products) (2015-2018)
- BizSafe Lev 3 (2017-2018)
- ISO9001:2015 (2015-2018)
- ISO14001:2015 (2017-2018)

As the company evolved, we found ourselves progressively at the edge of certifications offering: first, we had an increasing number of applications subject to NdA and an increasing number of materials subject to trade secrets; second -apart from ISO- certification bodies were unable to offer any valid framework for our products.

As such, we opted to develop a range of self-declared eco-labels compliant to ISO 14021, to ensure that products meet the same criteria that did allow us to get the certifications in the first place:

GREEN : Compliance with the standards by the Singapore National Environmental Agency for Green Label (Environmental Innovative Products)

HALAL : Compliance with the standard by the Singapore Workplace Safety and Health Council for Halal certification (Cleaning Products)

SAFE : Compliance with the standard of BizSafe by the Singapore Workplace Safety and Health Council

We are in the process of being re-certified ISO 9001:2015, and aiming to get the certification within 2020.
